CONGRATULATIONS Pete

Our Principal Podiatrist, Peter Macfarlane was honoured to be awarded the Podiatrist of the Year for working with children with sensory needs and disabilities.

A huge thank you to the anonymous individual who put Pete's name forward for this award.

WARTS

Our podiatrists are trained in a specialized, highly successful treatment that stimulates the body's immune system to attack a wart.

HIDDEN disabilities

Awareness to recognise and help individuals with a hidden disability.

We are proud members of Hidden Disabilities. Our staff are trained to assist individuals who may have a hidden disability such as autism, adhd, epilepsy, visual and hearing impairments.

If you have a hidden disability and require some assistance, such as a quiet room, sensory item or limited noise, please speak with our staff.

PAINFREE treatment of ingrown toenails

Onyfix is a painfree treatment of involuted and ingrown toenails. A composite is applied to the base of the nail by a Tread Right Podiatry podiatrist. The composite reshapes the nail, eliminating the curvature that creates ingrowns.

As the composite is applied to the nail only, there is no association with allergies. As such it can be applied to high risk clients and individuals with needle phobias.

3-4 applications are required over a 12 month period in order to reshape the nail.
